

Base Broadcast Unit APS

Product Overview:

BBU is a base broadcast unit that provides the pedestrian with audible information about the status of the walk display.

Benefits:

- BBU is a simple solution for core areas that do not have pedestrian actuation. BBU is mounted to the bottom of the ped head focusing the walk cycle signal to the crossing initiation point.

Operating Features:

- Ambient gain control adjusts audio volume outputs to parallel ambient noise levels.

Outputs

- Walk cycle tones / messages
- Generic or custom messages available
