

Recording Custom .wav Audio Using Audacity

Audacity can be downloaded from: <https://www.audacityteam.org/download/windows/>

After opening Audacity, make sure that your Channels dropdown is set to **Mono**. Then set your Project Rate to **16000 Hz**. Then click on the Record  Button, and Audacity will create a new .wav file. See interface below:

All Campbell Company products only accept audio files in .wav format.
