APS and MPS EXTENSION BRACKET

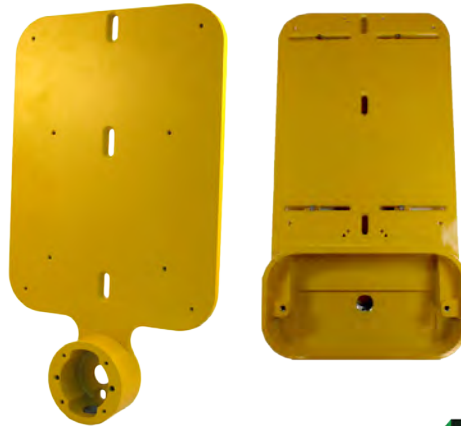

The MPS Extension Bracket provides a variety of options when placing a Campbell Company pedestrian station. The extension bracket allows the push button to be moved out as much as 18", great for bringing older crosswalks into compliance with current MUTCD and ADAAG guidelines. The MPS Extension Bracket (GMB) also allows for mounting two pedestrian stations on smaller diameter poles.

The 90 degree extension supports proper alignment of the APS or MPS with the crosswalk.

MODULAR PEDESTRIAN STATIONS

The Modular Pedestrian Station (MPS) allows flexibility in intersection design and configuration. The MPS are made from solid aluminum stock and are virtually indestructible. Campbell Company gives you the ability to customize the size, color, push button type, and mounting hardware. This system is complimented with a series of mounting accessories that allow the station to be moved closer to the landing, over obstacles, or turned 90 degrees. Multiple configuration options available.

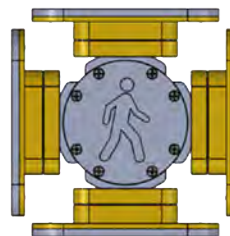

400 H MODULAR PEDESTRIAN STATIONS

The 400 H Modular Pedestrian Station (MPS) display is designed to mount a 5 x 9 pushbutton adapter plate with a 4 EVR PPB or a Campbell Company Guardian or AAPS 400.

POLE TOP GANGED MOUNTING BRACKET

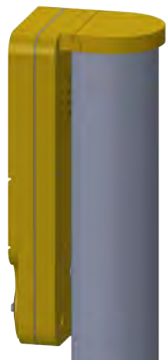

The aesthetically pleasing turret type Pole Top Mounting Bracket provides simplicity for mounting for a variety of pedestrian stations on top of a singular pole. The turret is positioned on the top of a stub pole. By rotating the turret to the direction of the pedestrian crossing allows for optimal orientation for each pedestrian to cross. Up to four 9x15 Campbell Company APS or MPS can be mounted to one bracket

BUTTON CUPS

Button cups for round and rectangle push buttons. These button cups are machined from solid stock and provide service entry from back. Each button cup is supplied with SS mounting hardware. Optional bottom service access and plug available.

BS POLE TOP ADAPTER:

The base station pole top adapter allows a base station to be mounted to a pedestrian stub pole with an aesthetically pleasing finish. The adapter can be mounted to any Campbell Company Station (non-cast) and is an easy field adaption. The standard pole top adapter is designed for 3.5" poles, other sizes available on request. Pole for illustration purpose only, base station sold separately.
